Strength of seasonality and trend

STL decomposition

$$y_t = T_t + S_t + R_t$$

Seasonal strength

$$\max\left(0,1-\frac{\mathsf{Var}(R_t)}{\mathsf{Var}(S_t+R_t)}\right)$$

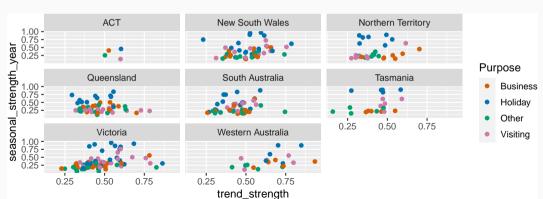

Trend strength

$$\max\left(0,1-\frac{\mathsf{Var}(R_t)}{\mathsf{Var}(T_t+R_t)}\right)$$

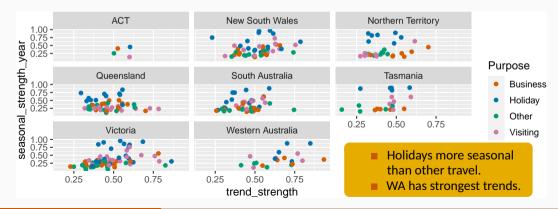

tourism %>% features(Trips, feat_stl)

Lab Session 9

- Use GGally::ggpairs() to look at the relationships between the STL-based features. You might wish to change seasonal_peak_year and seasonal_trough_year to factors.
- Which is the peak quarter for holidays in each state?

tourism %>% features(Trips, feat_acf)
